

Want to reduce setup time?

With our new design of conventional print plate cylinders, we had one target in mind. How can you save time during print setup.

Make it simpler, faster and better!

Instead of loosening-adjusting-locking on both sides of the cylinder, we have reduced the steps to adjusting only on one side.

This is reducing the adjustment time drastically and ensures the adjustment is not moving again during locking.

Your benefits

- ▷ Reduce setup time
- ▷ Better Print quality
- ▷ Increase Lifetime of Printing plates
- ▷ Reduce scrap due to less stops for adjustments
- ▷ Interchangeable design with existing Print plate cylinders

Want to achieve better print quality?

All parts on the Print plate cylinder have been designed to achieve better Print Quality and avoid damages on the Printing plates.

We paid special attention to ensure the Printing plate fit perfectly to the Print plate cylinder for the best print results.

No bending edge on the Print plates!

A common issue on old Printing plate cylinders is the fact that the plates need to be adjusted to the cylinder by hammering. This results in a bending edge and difficult adjustment.

With our new designed clamping bar this is not needed anymore and keeps the Printing plate undamaged.

For more information

Contact our Customer Service for a Quotation of this new Print plate cylinder design.

We also offer upgrades to Magnetic print plate cylinders, including accessories like Punching tools with digital Microscope and Rolling equipment.
